Skills

Languages: C#, Javascript, Python, Ruby, SQL(T-SQL), HTML, CSS

Backend/Database: .NET, Entity Framework, Rails, Mongoose, Node, SQL Server, PostgreSQL, MongoDB,

Frontend: React, Redux, HTML, CSS, D3

Other: Git, TFVC, Azure DevOps, Copilot

Recent Experience

Software Engineer 2, Vertafore (C#/.NET/SQL Server)

January 2025 - Present

- Delivered 300+ production enhancements spanning CRUD modules, front-end WinForms UI extensions, financial reporting, and data pipelines driven by complex insurance domain logic.
- Modernized and optimized reporting and financial data fetches in SQL Server, improving performance by ~90% and reducing reporting and batch processing times by several minutes.
- Developed end to end features leveraging modern MVC .NET practices in base feature releases, serving over 100 different international client businesses.

Software Engineer 1, Vertafore (C#/.NET/SQL Server)

December 2023 - December 2024

- Developed incremental enhancements to IMS application, serving MGA clients for insurance needs such as accounting, reporting, and underwriting features.
- Contributed to third-party (Kyriba Banking API) integration data feed in SQL Server.
- Partnered with QA and DevOps to build, test, and deploy versioned .NET services and SQL Server schema changes through CI/CD pipelines in Azure DevOps via agile practices.

Biomedical Engineer 2, Northwell Health

September 2020 - December 2022

- Contributed to a multi-million dollar deployment replacing specialized infusion technology; developed data-driven reporting and procedures to track and validate over 1,000 devices.
- Supported deployment of an ICU surge unit affecting hundreds of critical COVID patients.
- Managed, maintained, and serviced medical devices across multiple hospital disciplines. Orchestrated departmental inspections while maintaining a 95% equipment operational rate.

Projects

Spacebook (React/Redux, Ruby on Rails, and PostgreSQL)

[Live Demo](#) | [github](#)

- Developed a full-stack application using React, Redux, Ruby on Rails, and PostgreSQL, implementing centralized state management for users, posts, comments, and likes with full user auth and AWS S3 for image storage.

What-AI-Want (MongoDB, Express, React/Redux, Node)

[github](#)

- Co-developed an image generation application utilizing and leveraging OpenAI API to create asynchronous API calls with tailored prompting for simplified user experience.

Education

Bachelor's of Engineering in Biomedical Engineering

Fall 2014 - Spring 2018

SUNY Stony Brook

Awards: Magna Cum Laude, Presidential Scholar, Honors College

Relevant Coursework: Programming Fundamentals, Data Analysis(R), Linear Algebra, Differential Equations

App Academy(New York)

January 2023 - April 2023

In-depth Software Engineering program with focus on full stack webdev in Ruby on Rails, PostGres, React
